

Abstract

An exhaust gas purification system for purifying the exhaust gas of an internal combustion engine, especially an internal combustion engine featuring auto-ignition and/or direct fuel injection is described, which system includes at least one oxidation catalytic converter disposed in an exhaust gas duct of the internal combustion engine, at least one device for selective catalytic reduction of the exhaust gases which is installed downstream of the oxidation catalytic converter, and a feed device for feeding reducing agent into the exhaust gas stream upstream of or in the device for selective catalytic reduction.

A switch-over device (83) is provided for selectively feeding reducing agent (81) into the exhaust gas stream (29) upstream of or inside the at least one oxidation catalytic converter (4).

A corresponding method for purifying the exhaust gas of an internal combustion engine (2) is also provided.
